The article includes part of the research results from the second chapter of the module report "Physical Capital". The module report was carried out within the framework of the project "Infrastructure development and physical capital and polycentricity of Mazovia's development" (Development trends of Mazovia). In one of the chapters of the module, entitled. "Physical Capital - Non-Productive Assets," included a description of building and housing properties in the context of Mazovia's housing situation. The article's main focus is on determining the value of the province's housing stock. An estimate of the overall value of housing stock in Mazovia indicates that more than half of the assets contained in dwellings are located within the borders of Warsaw, about a quarter in the Warsaw Metropolitan Area and only less than a quarter - in the rest of the voivodeship.
