With the passage of time, dating back in its roots to the late 1960s, the concept of sustainable development is not losing relevance as a paradigm for both global and local development. Instead, it is gaining new practical approaches (and implementations) such as the Sustainable Development Goals (SDGs) announced by the UN in 2015 with the prospect of achieving them in 2030, and the announcements of the implementation of the Green Deal in the European Union (The European Green Deal), intended to lead to climate neutrality for Europe as a continent by 2050.
