The Mazovian Spatial Information System (MSIP) was created by a decision of the Board of Directors of the Mazovian Voivodeship as an element of the implementation of the state and European Union policy in the field of information society. The first stage of the creation of this system began in 2000 and included research and development work included in the targeted project entitled Spatial Database System for the Mazowieckie Voivodeship. These activities were aimed at developing a methodology for creating spatial databases for the Mazowieckie Voivodeship and proposing a concept for the Database System.
