Waste management, is a complex process that can be characterized in the briefest terms as waste generation and waste management. Of key importance in waste management is waste processing. In order to process waste – recovery and disposal – appropriate installations and facilities are required, the overwhelming majority of which are public purpose investments, within the meaning of the Law on Planning and Spatial Development, and projects that may always have a significant impact on the environment, within the meaning of the regulation on projects that may have a significant impact on the environment.
